Initial Prompt (Replit):

Create a one-page website for a personal portfolio of a mechanical engineering student.

Include sections: Home, About Me, Skills, Projects, and Contact.

In the Home section, add a short introduction with my name (Xy Zedric D. Sajenes) and a tagline related to designing, machining and engineering.

In the About Me section, include a brief background about being a student learning machine shop operations and engineering principles.

In the Skills section, list skills such as machine design, measuring tools, lathe operation, shaping, drilling, safety practices, and welding.

In the Projects section, showcase machine shop projects like lathe work, shaping operations, engine design and other workshop outputs, with short descriptions for each.

In the Contact section, include basic contact details or a simple contact form.

Use a clean and modern design with a white, black, and red color scheme (professional look).

Add a navigation bar with smooth scrolling to each section.

Make the layout responsive and visually appealing for both desktop and mobile devices.

Include simple icons or visual elements to enhance the design.

Refinement Prompts (Replit):

1. change this logo (first picture) to this (second picture)
2. replace the bottom one with this
3. replace this picture with something that represents precision and efficiency, also replace my email handle with this instead, xsajenes@addu.edu.ph
4. replace this section with fabrication work instead and include this picture (2nd picture)
5. use this picture for the precision lathe work instead
6. replace the logo in the nav bar with this

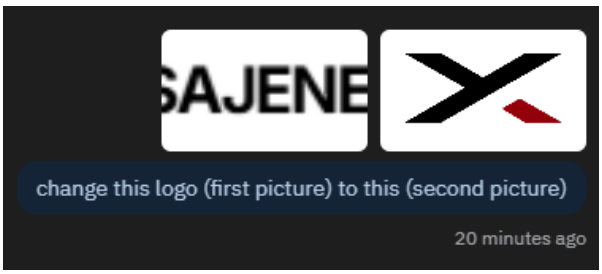
Prompt	Result
Create a one-page website for a personal portfolio of a mechanical engineering student. Include sections: Home, About Me, Skills, Projects, and Contact. In the Home section, add a short introduction with my name (Xy Zedric D. Sajenes) and a tagline related to designing, machining and engineering. In the About Me section, include a brief background about being a student learning machine shop operations and engineering principles. In the Skills section, list skills such as machine design, measuring tools, lathe operation, shaping, drilling, safety practices, and welding. In the Projects section, showcase machine shop projects like lathe work, shaping operations, engine design and other workshop outputs, with short descriptions for each. In the Contact section, include basic contact details or a simple contact form. Use a clean and modern design with a white, black, and red color scheme (professional look). Add a navigation bar with smooth scrolling to each section. Make the layout responsive and visually appealing for both desktop and mobile devices. Include simple icons or visual elements to enhance the design. Show less	I'll build you a clean, modern personal portfolio website for Xy Zedric D. Sajenes with a white, black, and red color scheme. Let me create the React app right now. 2 actions Now I'll launch the design subagent to build the full portfolio while the workflow starts: 2 actions Your portfolio is being built right now by a specialized design agent. It's working on: • A bold, industrial-feel landing page with your name and a standout tagline • Smooth scroll navigation bar with active section highlighting • Skills section with icons • Projects section showcasing your machine shop work • Contact section with a form • Red, white, and black color scheme throughout • Scroll animations using Framer Motion Let me wait for the design to finish, then I'll show you the result. Waited 1 minute 8 seconds for background jobs to complete The design is complete. Let me start the workflow and take a screenshot to verify everything looks great: 2 actions Scroll to latest



Planning logo image integration

I'll copy the logo image to the public folder and swap it into the navbar.

2 actions

Now update the navbar to use the image instead of the text:

2 actions

Also update the footer logo (same text was used there too):

2 actions

The footer is on a dark background, so I'll use the logo with an invert filter there:

2 actions

Now let me take a screenshot to verify:

2 actions

The logo has been swapped out successfully. You can see your custom "X" mark logo in the top-left of the navbar, replacing the old text. It also looks great with the bold red now showing properly on the "PRECISION." heading and the "VIEW PROJECTS" button. The logo also appears in the footer (inverted white) on the dark background.

Checkpoint made 19 minutes ago

Worked for 51 seconds

5 actions

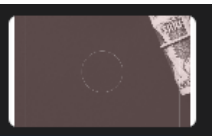
Done. The footer now uses your dark-background logo. The black square background on that version blends naturally into the dark footer. Let me verify it quickly:

2 actions

The footer logo is now updated to the dark-background version — the white "X" mark on the black square sits naturally in the dark footer. The navbar at the top keeps the original light version. Both logos are in place.

Checkpoint made 19 minutes ago

Worked for 31 seconds



replace this picture with something that represents precision and efficiency, also replace my email handle with this instead, xsajenes@addu.edu.ph

18 minutes ago

Planning content and email updates

Let me check the current image and email in the code:

7 actions

I'll generate a precision/efficiency themed image and update the email at the same time:

2 actions

Let me use a proper precision engineering photo and update the email at the same time:

2 actions

Now update the email address:

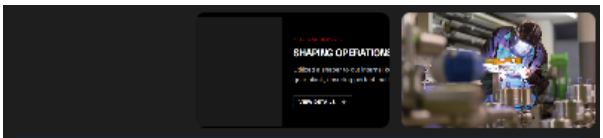
2 actions

Let me verify the changes look right:

2 actions

Both changes are done. The portfolio is updated with:

- **About section image** — replaced with a close-up photo of precision metal machining/workshop tools, conveying exactness and craftsmanship
- **Email** — updated to `xsajenes@addu.edu.ph` in the Contact section



replace this section with fabrication work instead and include this picture (2nd picture)

14 minutes ago

Planning project section update

Let me check the projects section structure first:

3 actions

Now I'll replace the Shaping Operations entry with Fabrication Work using the uploaded photo:

2 actions

Let me take a screenshot to confirm it looks right:

2 actions

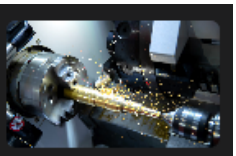
Done. The "Shaping Operations" entry has been replaced with **Fabrication Work** in the Projects section:

- **Category:** Welding & Assembly
- **Description:** Covers structural fabrication, welding, level checks, and fit-up techniques for dimensional accuracy
- **Image:** Your welding photo (the person in the welding mask working with metal components)

Scroll down to the Projects section to see it in full. The image will show in grayscale by default and reveal in color when you hover over it — matching the other project cards' style.

Checkpoint made 13 minutes ago

Worked for 42 seconds



use this picture for the precision lathe work instead

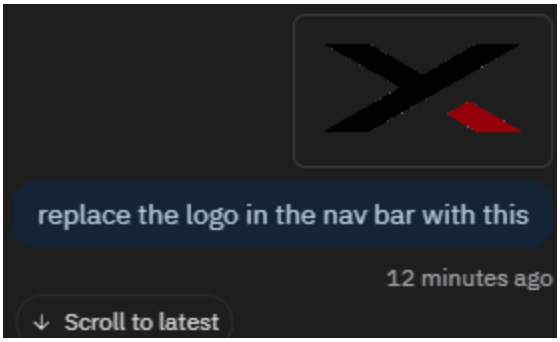
13 minutes ago

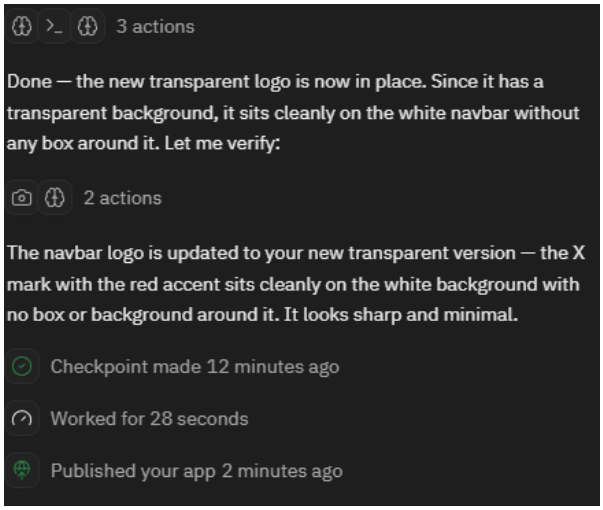
5 actions

Done. The Precision Lathe Work project card now uses your lathe photo — the dramatic action shot with sparks flying from the turning operation. It'll show in grayscale by default and reveal in full color on hover, just like the other project cards.

Checkpoint made 13 minutes ago

Worked for 20 seconds





Final Reflection:

I created a professional one-page portfolio website for my mechanical engineering studies, focusing on a clean white, black, and red industrial aesthetic. I organized the site into five key sections, Home, About Me, Skills, Projects, and Contact, to clearly present my background in machine shop operations and engineering principles. Using Replit's React environment, I implemented a responsive layout with smooth-scrolling navigation and interactive elements like Framer Motion animations.To make the site truly mine, I refined the design by replacing generic text with a custom "X" logo in both the navbar and footer. I also updated the imagery to better represent precision and efficiency, specifically showcasing my work in fabrication and lathe operations. Finally, I ensured professional communication by integrating my academic email before successfully publishing the completed app.
